

# CMSI 401 Project Status Sheet

Fall 2005

<b>Name:</b>	Mackenzie Tjogas	<b>Date:</b>	Feb 18 <sup>th</sup> 2018
<b>Project:</b>	PurpleRun	<b>Period Covered:</b>	Up to Feb 18 <sup>th</sup> (week 7)

## Accomplishments since last report:

- Added a settings page to my app
- Now have all the needed pages for the app
- Researched different reliable sources for information to display
- Found language translation API
- Found emergency 911 call API

## Scheduled tasks to be done by next report:

- Implementing the language translation API
- Implementing the emergency call API
- Begin only letting users in to the app when they input the password
- The 911 call can only be stopped by the password being inputted

## Noteworthy risks, concerns, or problems:

- May not do personal passwords but instead do an app-wide password that everyone gets (the same one) and uses to work the app
- Changing the page routing from homepage to main menu, the current implementation is wrong
