CMSI 401 Project Status Sheet
Spring 2018

Name: Mackenzie Tjogas

Date: April 2nd 2018

Project: PurpleRun

Period Covered: March 18 – April 2nd

Accomplishments since last report:

➢ Added links (to information) to almost every menu page

➢ Fixed the homepage button to easily take users into the app

➢ Updated documentation

➢ Made sure that when a user ends a call they are taken back to the app

➢ Changed the design decision about app-wide passwords after further research

   o Don't want to scare users off with the idea of an "account" (even though it would not be an account), because the threat of being linked to PurpleRun could be enough to deter a user from using the app **even if** the threat is not actually existent.

Scheduled tasks to be done by next report:

➢ Either successfully implement the translation API or go in another direction

➢ Add links to the two remaining menu pages without them

➢ Add information to all the pages so they have as much as possible

➢ Make it so that when a user clicks a link and are taken to it, they can easily click back into the app (and be where they were before the link).

Noteworthy risks, concerns, or problems:

➢ Issues with the translation API
